YARNS

Acrylic

The synthetic fiber is soft, warm, lightweight, machine washable, fastdrying and long wearing. It is resistant to shrinkage, sagging, stretching and does not itch. It is also excellent for cushioned products and has high wicking properties.

Bioceramic

Bioceramic fiber embedding micro ceramic particles gently warms the muscles returning to body the F.I.R. (Far Infrared Rays).

Cotton

This is a soft heat-resistant vegetable fiber used in garments since 3.000 B.C. It absorbs and retains moisture, is readily washable and available in a wide variety of types and qualities. It can be up to one fifth of its weight in water before it actually feels damp. Long staple combed cotton is generally considered to provide the finest quality cotton yarn for socks.

Elastane

The synthetic fiber is strong, lightweight, flexible, comfortable, machine washable and shape retentive. Elastane can stretch over five times its relaxed length and fully recover. A common trademark for elastane is Lycra®.

Meryl® Skinlife

Meryl® Skinlife, with built-in silver micro-particles, belongs to the most advanced mix of intelligent polyamide yarns. It has permanent bacteriostatic properties to reduce unpleasant odors in your socks and to maintain the natural balance of the skin.

Merino Wool

The highest, finest and best type of wool obtainable. Merino wool is listed as a Class One wool. Merino Wool does not itch and is shrink treated to hold its size and shape.

Polyamide Nanoglide™

Nanoglide™ reduces the friction between skind and fabric considerably, cools and dries quickly and decreases the risk of blistering and irritation of the skin.

Polypropylene

This synthetic fiber is lightweight, hydrophobic, durable and resilient. It has moisture transport properties.

KIDS SIZE	KIDS SIZE

MOUNTAIN PERFORMANCE TECHNOLOGY

TECHNOLOGY HIGHLIGHTS

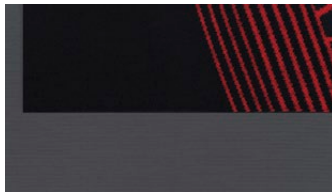

BIOCERAMIC FIBER
embedding micro ceramic particles gently warms the muscles returning to body the F.I.R. (Far Infrared Rays)

LIGHT COMPRESSION TECHNOLOGY
ensures a better muscles support and helps the sock to fit like a second skin.

ACHILLES TENDON PROTECTION
makes skiing more comfortable as prevents any inconvenient scratch on this area.

TARGETED REINFORCEMENTS
allow different thicknesses of the sock in different areas and protect in the proper way leg and foot parts.

SKI SOCK

The MOUNTAIN PERFORMANCE sock uses the ultimate RESISTEX® BIOCERAMIC technology, which absorbs the body heat returning it in the form of FIR. The result is a constant and gentle warming of tissues and muscles. The finest merino wool used in the reinforcements ensures the maximum perspiration, while the ventilation channels in the foot part allow a better perspiration.
