

Iconic brand, born in the U.S.A. Globally respected and worldwide distributed, Serengeti® is the unique brand able to combine the most advanced eyewear technologies, inherited from more than 140 years of R&D, the Americana culture and the finest sense of aesthetics, design and creativity.

# **CHASE THE LIGHT**

Artists spend their lives chasing the light. In search of those rare moments when the sun and elements magically align to create the perfect shot; the ideal reflection at the most exquisite angle, the color and atmosphere all coming together to create art.

At Serengeti<sup>®</sup>, we design the sunglasses that let you chase the light and capture it - revealing the world at its most inspiring.

Make no mistake, the idea of chasing the light is about more than just sunlight. It's about chasing life. Chasing success. Joy. Enlightenment. Striving to go places and do things we've never done before. And it's a passionate pursuit that's somehow distinctly American.

At Serengeti®, we chase the light by constantly striving for design perfection. Forever in pursuit of the perfect curve.

The consummate contour. The most glorious glass. Our master craftsmen are inspired and encouraged to go beyond product design, beyond craft to inspire you, the wearer. And you'll feel the results every time. Wherever you are. Whatever you are chasing.

We're not just chasing sunglass

We're crafting and mastering eyewear.

For those seeking to express their uniqueness, authenticity and style walking the urban streets, we propose Serengeti®'s Collection, a remarkable range of contemporary designs that delivers the unmatched performance of Serengeti®'s unique, no compromise, technology.

# BUILT ON 140 YEARS OF EXPERIENCE.

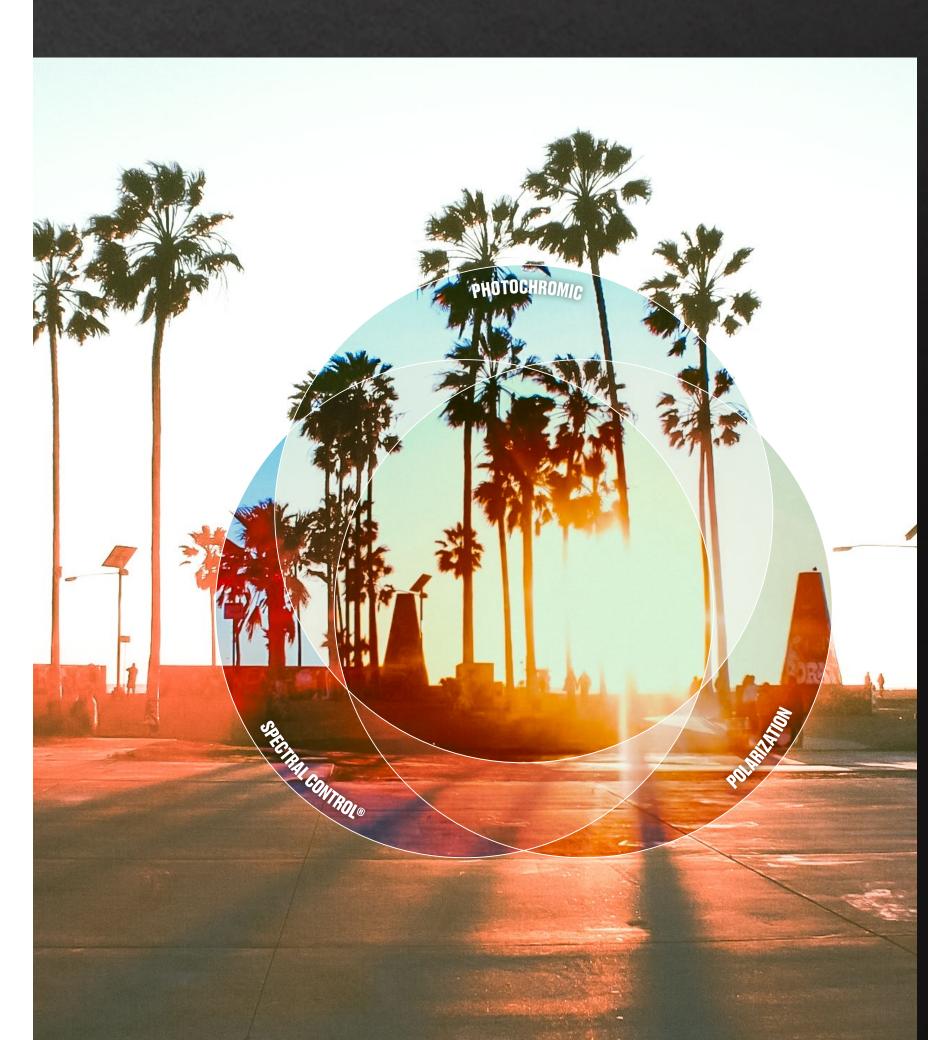

The Serengeti® story began in 1877 with Corning®, an optical laboratory and pioneer in glass technology. Throughout the years, Innovation and Research & Development have played a key role in this frenzied quest for quality and performance. This hard work and determination have created Serengeti®. These decades of experience allow Serengeti® to justifiably be viewed as the world's most innovative and creative premium eyewear brand.

# EYEWEAR CRAFT AND MASTERY

# THE ULTIMATE HIGH DEFINITION VISION OF EVERYTHING IN SIGHT.

No other sunglass brand can claim to combine three industrydefining technologies into one ultra-superior lens. Then again, innovation has always been inherent in our DNA. With gradually adjusting Photochromic lenses, naturally color-enhancing Spectral Control® filters, and glare-reducing Polarization, every Serengeti® lens is unique.

With that, achieving clarity in life is not the end game — but rather, the beginning. You are now able to stop looking at the world and start really experiencing it.

# PHOTOCHROMIC TECHNOLOGY

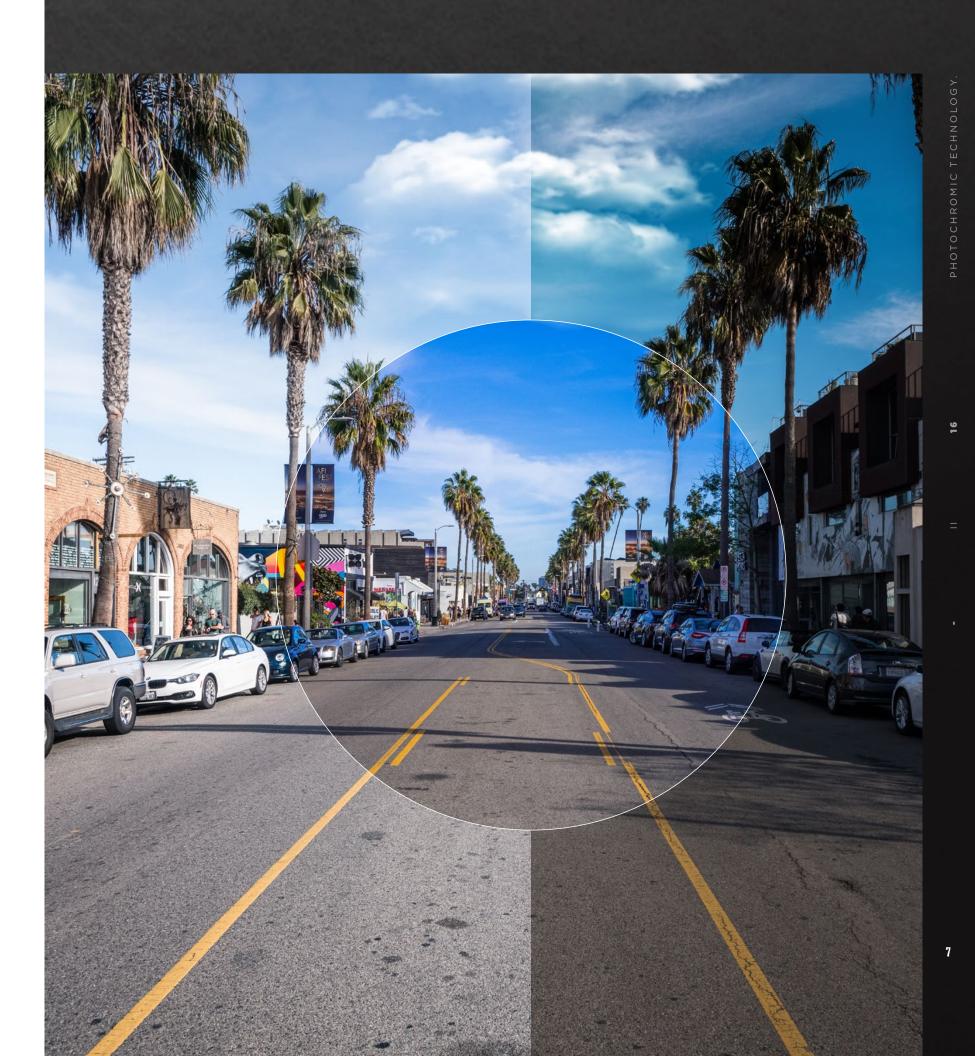

# MOLECULARLY INFUSED INTO EVERY SERENGETI® LENS

- REACT TO UV LIGHT
- ADAPT TO ALL LIGHT CONDITIONS
- PROVIDE YOUR EYES WITH THE EXACT AMOUNT OF LIGHT NEEDED

As the pioneer of Photochromic technology, Serengeti® leads the industry in creating lenses that adapt to any light condition in any setting.

Serengeti® Photochromic lenses are activate by the amount of UV radiation in the atmosphere and engineered to transition from light to dark, gradually. Energy from UV radiation causes the polarity of the silver salt lens molecules to expand in brighter conditions, creating a denser lens that absorbs more light. In darker conditions, the molecules compress and separate to allow in more light.

Our Photochromic lenses optimize for the environment, providing your eyes with the exact amount of light needed at any time and in all weather conditions. It enables your eyes to discern shapes and colors more quickly while eliminating eyestrain.

# SPECTRAL CONTROL® TECHNOLOGY

# MOLECULARLY INFUSED INTO EVERY SERENGETI®LENS

- FILTER UP TO 95% OF BLUE LIGHT
- ENHANCE COLORS AND CONTRASTS
- PROTECT YOUR EYES FROM AGING

Specific and unique to Serengeti®, Spectral Control® technology provides you with the ultimate High Definition. It fine-tunes the light waves passing through the lens, for a highly reduced blue light transmission, naturally enhanced detail and colors that pop, crisp and clear.

Blue light is necessary to regulate our biological clock. However, it is also really damaging for the eyes and the retina, being a risk factor for age-related macular degeneration (AMD).

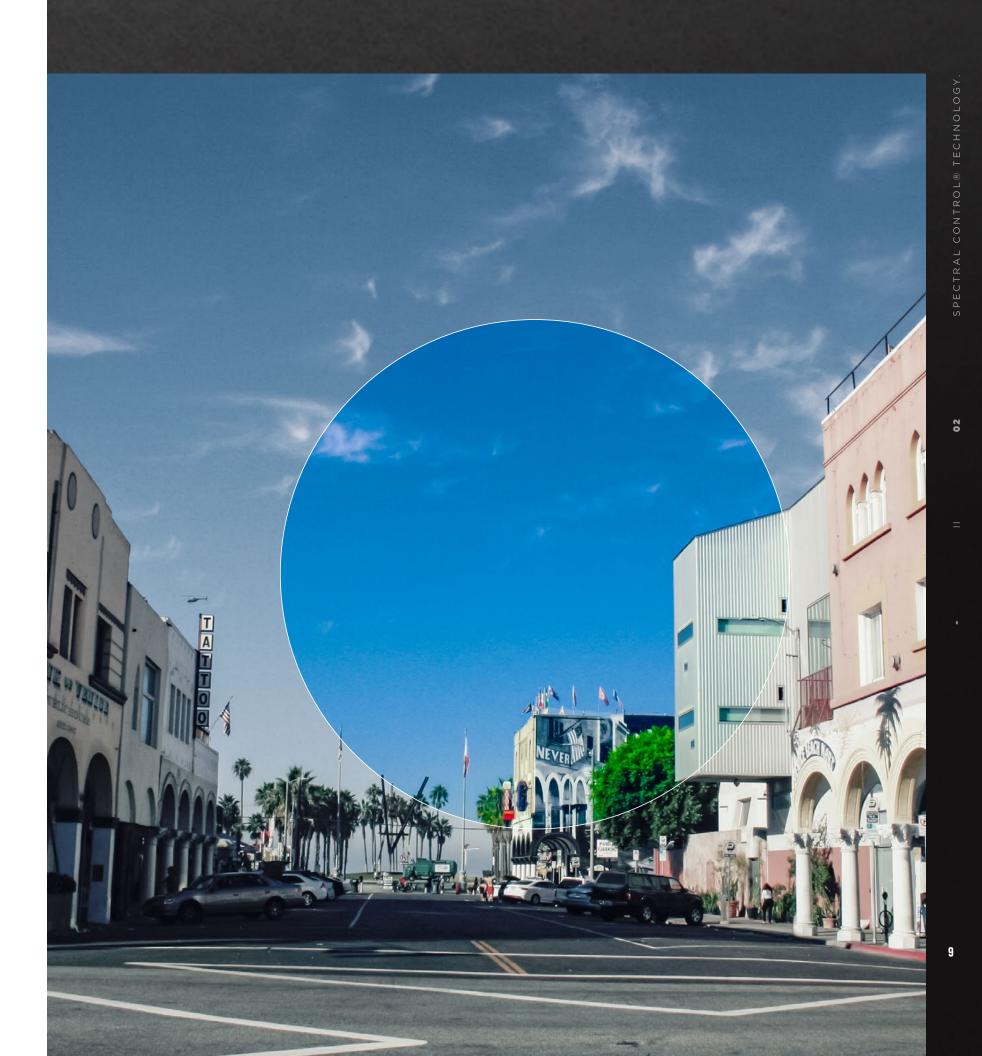

Our Spectral Control® technology filters out up to 95% of the blue light, reducing blue blur and visible noise.

This protects your eyes from aging and damage, to preserve your sight perfectly.

Our lenses selectively manage light wavelengths, distinguishing reds, greens and yellows, in any light condition.

They ensure improved and enhanced depth perception and maximum color contrast.

Landscapes that would be washed out, dull or flat with other lenses become defined, vibrant and vivid — while your eyes remain cool and relaxed.

# **POLARIZATION** TECHNOLOGY

- ABSORB ALL FOUR TYPES OF GLARE
- EXPERIENCE ABSOLUTE CLARITY
- RELIEVE EYE FATIGUE

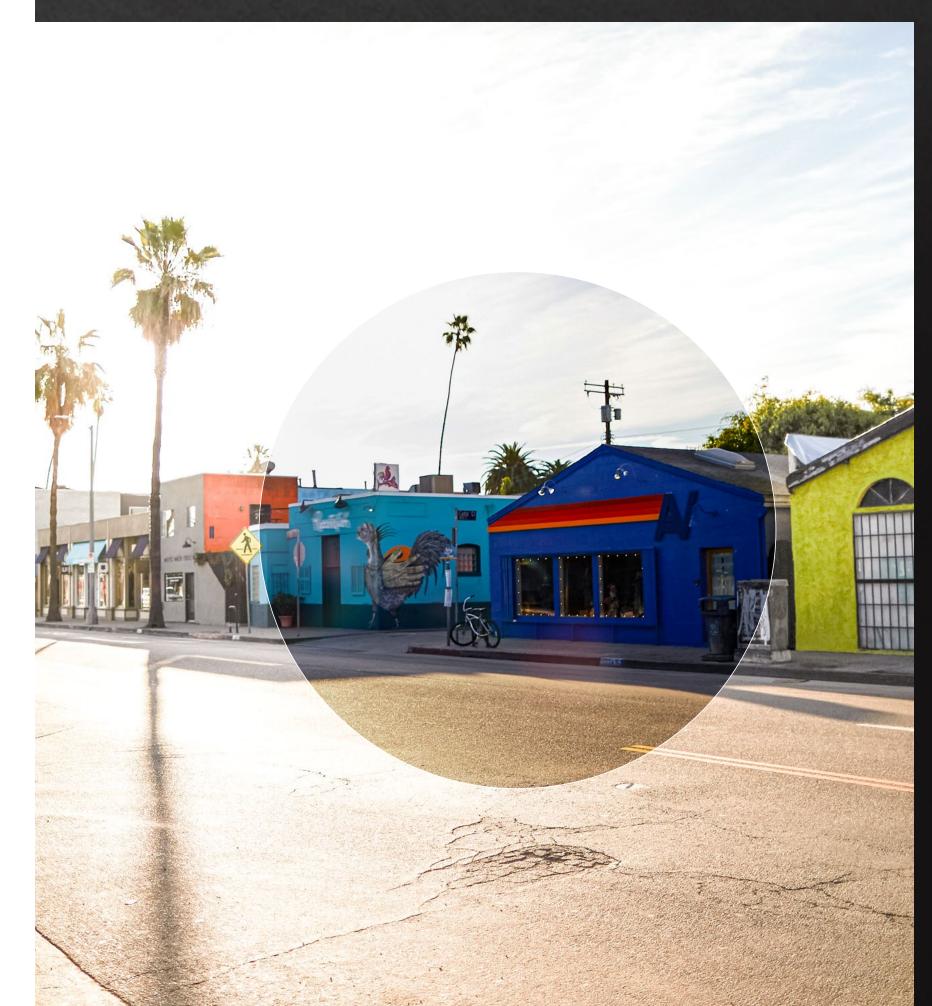

Whether you're in a high- or low-glare environment, you deserve lenses that give you the ultimate glare protection and with it, uncompromised clarity.

When glare reflects off the road, water snow or other areas, parallel light rays can pass through unhindered, while distracting perpendicular rays are reflected.

The Serengeti® Polarization technology eliminates 99.9% of disruptive glare from the four types of glare: distracting, discomforting, disabling and blinding. This ensures, therefore, no more reflection from: vehicle headlights, intense lights, shiny surface reflections and the everyday outdoors.

This Polarization technology relieves eye fatigue. It also allows you to experience absolute clarity by discovering layer upon layer of details that glare would have otherwise kept hidden.

Some of our products feature non-polarized lens options, ideal for pilots flying aircraft with digital instrument panels.

# INCREDIBLE LENS MATERIAL

At Serengeti®, we pay particular attention to the materials we use to protect your eyes and offer you the best visual acuity available on the market. From the finest and ultimate raw materials to the latest coatings, every step of the production and every component are meticulously checked to guarantee the best quality and protection.

# **ULTRA-LIGHT MINERAL LENS: EXPERIENCE THE ULTIMATE AND ULTRA-**LIGHT MINERAL LENS ON THE MARKET.

Serengeti® mineral lenses not only protect your eyes, it also protects our environment, because both of these are invaluable. Serengeti® offers the best eye protection while at the same time giving you an unsurpassed visual experience, all the while minimizing our ecological footprint so we preserve our planet for future generations.

Made with borosilicate optical glass, created from 100% natural components, like sand, they are 100% recyclable.

A full 20% thinner and lighter, our Borosilicate mineral glass lenses are finer than any other mineral lens.

Every pair of Serengeti® mineral lenses is unique: each Photochromic lens passes through a Hydrogen-fueled Lehr furnace, which activates the Spectral Control® technology with varying temperatures that determine the proprietary

They are also chemically tempered to ensure scratch and impact resistance.

To complete this unrivalled visual experience, an anti-reflective coating is added to the backside of the lens, cancelling the scattering light that causes reflective glare.

# LENS HUES AND TECHNOLOGY

Launched in 1985, this ideal driving sunglass is the original and emblematic lens of Serengeti<sup>\*</sup>. The amber-colored Drivers lens naturally amplifies contrast and definition. It's engineered to transmit and distinguish red, green and yellow colors, so they can pop in all environments.

Overcast to medium light conditions.

Ideal for driving and everyday use.

NON-POLARIZED MINERAL (CATEGORY 2 TO 3)

POLARIZED MINERAL (CATEGORY 2 TO 3)

This lens has all the benefits of our signature Drivers lens, along with a stylish gold-flash mirror, providing an additional layer of protection.

Intense light conditions.

Ideal for driving and everyday use.

# DRIVERS® GRADIENT

This lens is darker at the top and lighter at the bottom. Protecting your eyes from above while providing a clear view of the dashboard below.

Ideal for pilots, our non-polarized Drivers Gradient finish captures details at great distances without obscuring their view of the digital instruments.

Overcast to medium light conditions.

Ideal for driving and everyday use.

POLARIZED MINERAL (CATEGORY 3 TO 3)

14

NON-POLARIZED MINERAL (CATEGORY 2 TO 3)

POLARIZED MINERAL (CATEGORY 2 TO 3)

555 nanometers is the center of light's visible color spectrum, right on the border of yellow and green. This is where the human eye sees best. In low light conditions, this lens allows more yellow and green to pass through, creating relaxing conditions

for the eyes.

Intense light conditions.

Ideal for driving, everyday use and for boating activities.

NON-POLARIZED MINERAL (CATEGORY 2 TO 3)

POLARIZED MINERAL (CATEGORY 3 TO 3)

555 NM® BLUE

A beautiful variation of the 555nm, featuring a reflective blue dielectric mirror coating that reflects more glare and improves

Overcast to medium light conditions.

Ideal for everyday use and boating activities.

POLARIZED MINERAL (CATEGORY 2 TO 3)

A high-contrast rose-colored lens with a silver mirror. The Sedona lens improves contrasts whatever the luminosity definition and provides ultimate clarity to offer a superior image definition while reducing glare from flat light.

Intense light conditions.

Ideal for boating and mountain activities.

# SEDONA® BI-MIRROR

The stylish silver-flash bi-mirror on the Sedona provides your eyes with ample protection on top and below, producing beautiful clarity in the middle. This increased protection allows you to see details when looking close-up, yet blocking glare from above (sun) and below (surface).

Intense light conditions.

Ideal for boating and mountain activities.

POLARIZED MINERAL (CATEGORY 3 TO 3)

POLARIZED MINERAL (CATEGORY 3 TO 3)

# FRAME MATERIALS & TECHNOLOGY

# MADE IN ITLAY

All Serengeti frames come to life in Italy, sensitizing. where we monitor the manufacturing process to make sure it is in keeping with the ACETATE perfection and quality that is synonymous with the Serengeti brand. This also enables Expertly produced and cured from all-natural us to control and limit our impact on the cotton, our Cellulose Propionate Acetate is environment, as with shorter ship times there not only handcrafted to be lightweight but is a reduction in CO2 emissions.

# **ECO-FRIENDLY ACETATE**

Made of cotton or plant matter which is METAL 100% FSC certified cultivation, our new Eco-Friendly Acetate frames are made from cellulose acetate created from renewable resources widely present in nature. Our Eco-Friendly Acetate is also biodegradable and Metal frames also have the great advantage free of petrol-based plasticizers.

While growing, the plants absorb CO2 and reject oxygen during the traditional photosynthesis process which serves to increase the gap of CO2 rejection between our Eco-Friendly Acetate frames compared to traditional Petrol based acetate frames.

This eco-conception does not impact the Using only the highest-quality injected and availability in an incredible variety of and comfortable. colors and patterns which allow us to create remarkable and elegant pairs of sunglasses.

Another positive factor is that this material is also considered as non-irritant and non-skin

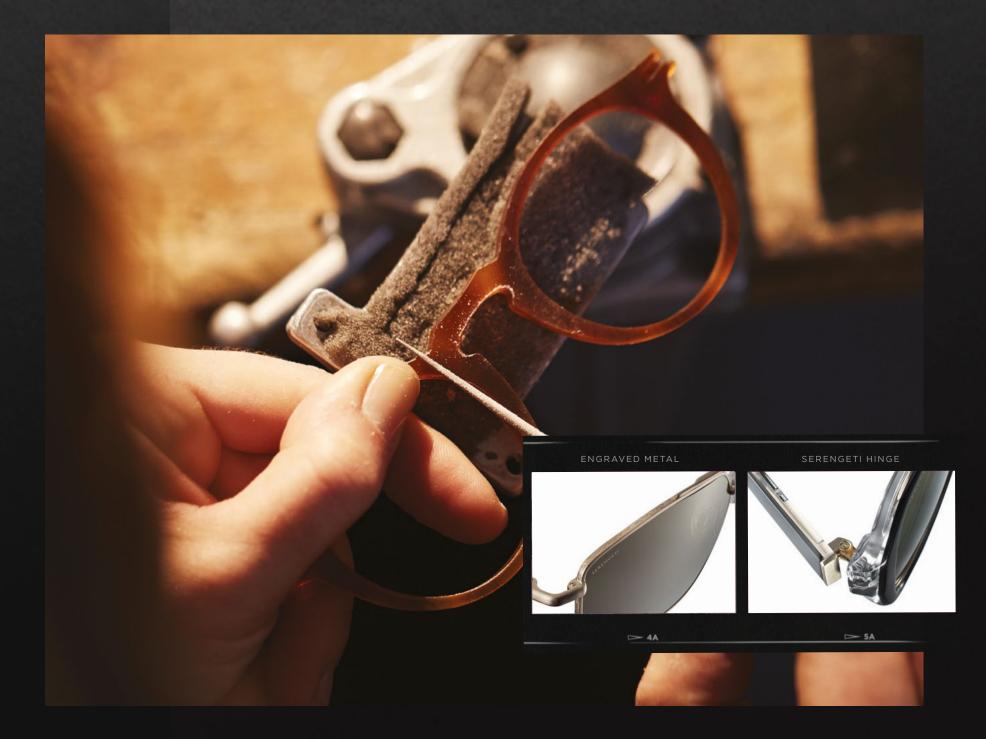

can be made into beautiful patterns and brilliant hues. Pliable when heated, it is ideal for custom fitting.

Offering the possibility of creating thin and lightweight frames, handcrafted for ultimate comfort and a wide fit range.

of being strong and impact resistance as well as being highly aesthetic by proposing an infinite variety of colors and combinations with other materials.

# **NYLON TR90**

quality of our frames. Our Eco-Friendly Nylon TR90 for superior durability, these Acetate offers the same physical and fashionable frames have the added benefit mechanical properties of the standard of being exceptionally light, strong, acetate: lightness, fit customization, comfort chemically resistant, and extremely flexible

# **ENGRAVED METAL**

Our frames are designed to be an extension Each aspect of our products is meticulously of your personality and we continue to work thought-through and each detail is carefully on this so your uniqueness can be expressed refined. To reinforce our product and brand in the frame design. To enhance our identity, we have created a new and unique Premium Metal designs which are crafted distinctive hinge that is discreet and chic. with premium materials, we have created a special engraved pattern that is applied to the frame.

# HOW DOES VARIODRIVE THIN DESIGN TECHNOLOGY WORK?

Software using the most advanced calculations is used to create customized lenses and the ultimate in comfort and lightweight products. Every prescription is reassessed to compensate for optical distortions related to the frame wrap angle. When the prescription reaches the limits of the conventional digital surfacing method, our patented algorithm calculates the best lens geometry regarding the Optical Area and the Transition Zone, and reduces the Edge Thickness (US Patent number 8,002,404). Every product is customized to the prescription, frame and wearer's facial metrics and is precisely surfaced thanks to the latest Digital lens surfacing technology.

The Serengeti RX program offers the 3-in-1 technology: Photochromic, Spectral Control and Optional Polarization.

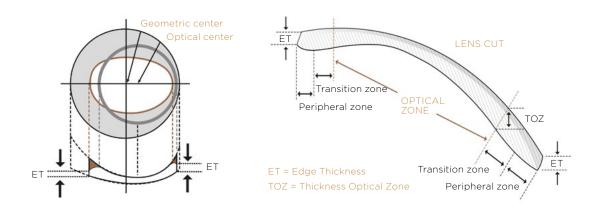

The entire collection is available in prescription, except Carrara Leather and Leandro Glacier.
